Consob paper

Artificial intelligence
in the asset and wealth
management published
in June 2022 in the
Consob Fintech series

The growing interest of regulators and supervisors

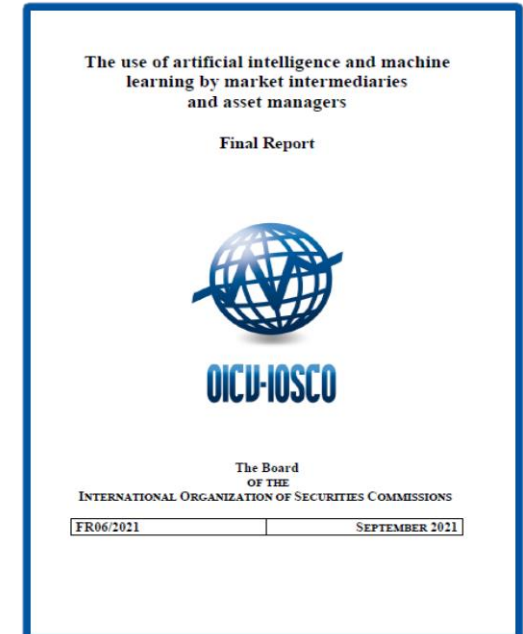

Brussels, 21.4.2021
COM(2021) 206 final
2021/0106 (COD)

Proposal for a
REGULATION OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL
LAYING DOWN HARMONISED RULES ON ARTIFICIAL INTELLIGENCE
(ARTIFICIAL INTELLIGENCE ACT) AND AMENDING CERTAIN UNION
LEGISLATIVE ACTS
{SEC(2021) 167 final} - {SWD(2021) 84 final} - {SWD(2021) 85 final}

In 2021 IOSCO
published guidance on
the use of AI by market
intermediaries and
asset managers

In 2021 EC proposed
harmonized rules on AI

CONSOB's survey in collaboration with Assogestioni

The objectives and...

The survey aims to gather evidence on:

- (i) use of artificial intelligence (AI) systems in asset management in the domestic market, at all stages of the value chain, also considering the projects planned and/or in progress
- (ii) opinions on expected benefits and potential risks related to the use of AI systems

The survey was carried out in July 2021 in collaboration with Assogestioni, and involved eight large asset management companies, belonging to groups representing more than 60% of the assets under management in Italy as of the first quarter of 2022

CONSOB's survey in collaboration with Assogestioni

...the areas investigated

The survey consists in 5 sections on:

- (i) strategic objectives related to the development and use of AI systems
- (ii) areas of use and technologies adopted
- (iii) ongoing projects/experiments/research
- (iv) organization and governance
- (v) expected benefits and perceived risks

The development and use of AI systems: strategic goals

- The development of AI systems is already a strategic priority
- AI as part of a general technological innovation strategy

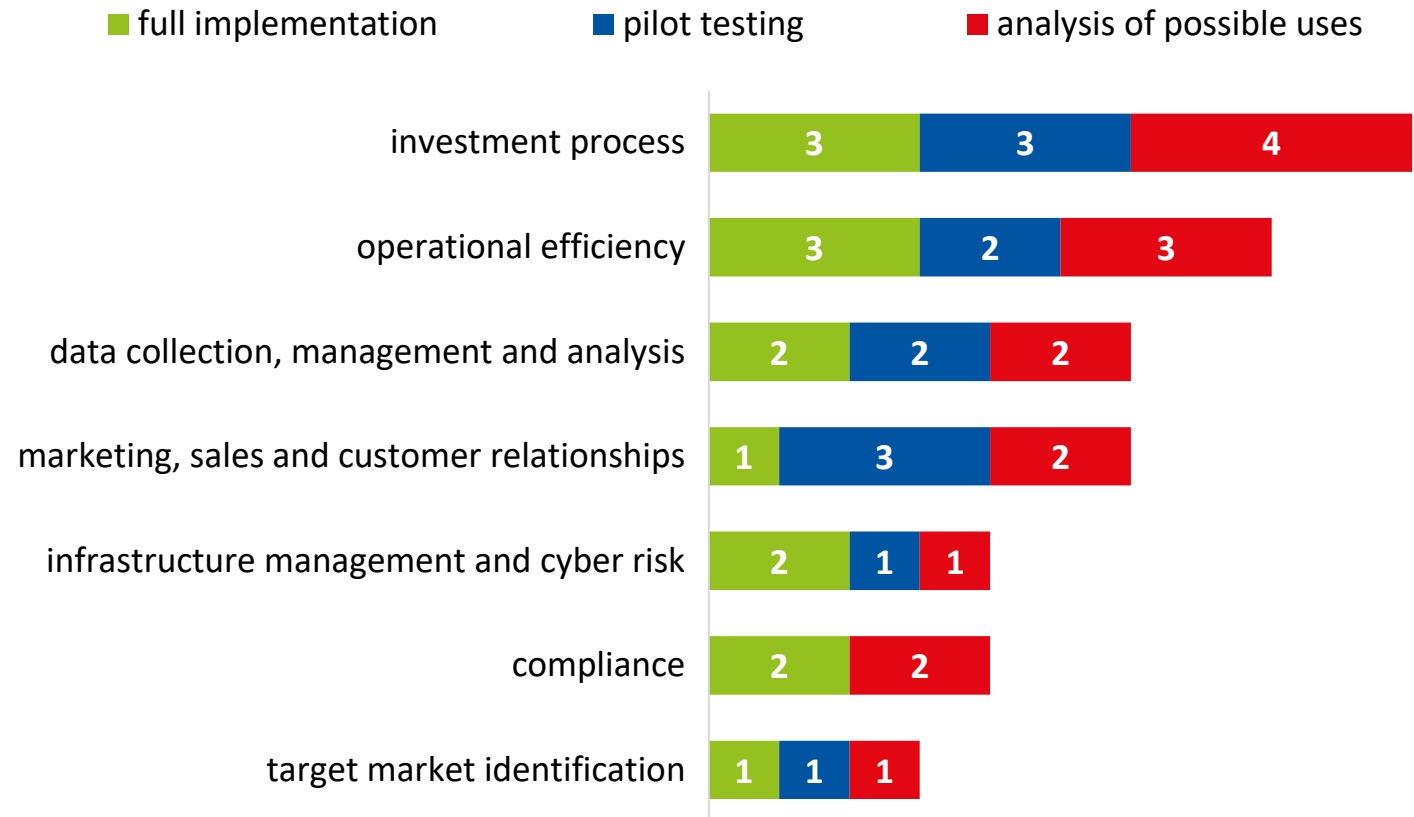

Why are AI systems a strategic priority (or will they be in the near future) for your Company?

Areas involved in use or development of AI systems

- AI are currently used by the majority of respondents
- In almost all cases, AI systems have been in use for at least one year
- Several AI projects are ongoing

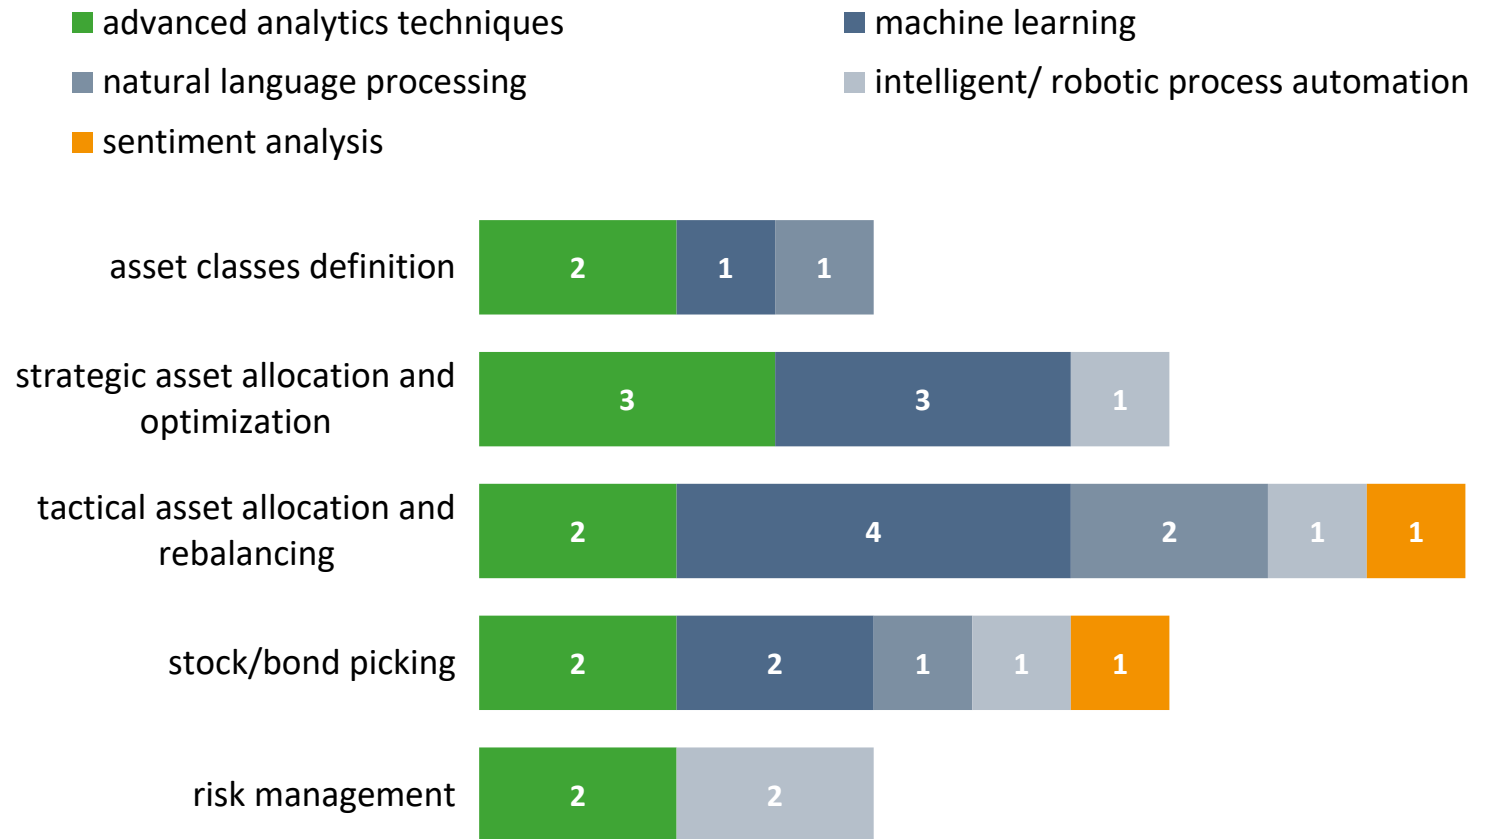

For each area, at what stage is the use or development of AI systems?

AI in the investment process: technologies and products

- AI technologies are used mainly for UCITs
- The use for AIFs is less widespread
- In some cases, AI is also used for ESG funds

Which AI technology does your company use at each stage of the investment process?

Organization and human resources

Which functional areas are involved? Are there adequate skills in the company?

Data and algo governance

procedures are still evolving

- data-governance in 5 companies
- algo-governance in 3 companies

the need for strong human oversight and control

- none of the respondents mentioned AI systems acting autonomously
- in 4 companies there is no direct use of AI systems in relevant decisions

Expected benefits and perceived risks

The expected benefits cover several areas

Main risks are related to explainability of outputs/ algorithms

Looking ahead

- AI technologies will become more and more used in the next five years
- Several projects planned for the future, mainly in the area of investment process
- Technological and regulatory developments are the most important factors that will drive the intensity of AI use in the future

In conclusion

- AI technologies are a strategic priority for asset management companies as they are considered an important tools to enhance performances in several areas
- AI systems are already used in a variety of processes and many other processes will be interested in the future
- A good governance is crucial, and this issue is on the agenda of asset management companies
